Constructive recognition

Problem

Let $\ensuremath{\mathbb{G}}$ be some ambient group and

$$M_1,\ldots,M_k\in\mathbb{G}.$$

Find for
$$G := \langle M_1, \ldots, M_k \rangle$$
:

- The group order |G| and
- an algorithm that, given $M \in \mathbb{G}$,
 - decides, whether or not $M \in G$, and,
 - if so, expresses *M* as an SLP in the *M*_i.

The Aschbacher approach

Current status in GAP

Recursion works again

Having recognised *H* in this sense, we can:

- ask H to generate preimages of its nice generators,
- compute generators for *N*,
- recursively recognise N and
- put together the nice generators for G.

If we remember how we created the generators for N, then we have recognised G constructively:

- Using H and N we can test membership in G,
- express elements as SLPs in the nice generators,
- and, given preimages of the original generators of *G* under some homomorphism, we can find preimages of the nice generators.

The Aschbacher approach

Aschbacher has defined classes C1 to C8 of subgroups of $GL_n(\mathbb{F}_q)$.

Theorem (Aschbacher, 1984)

Let $G \leq GL_n(\mathbb{F}_q)$ and $Z := G \cap Z(GL_n(\mathbb{F}_q))$ the subgroup of scalar matrices. Then G lies in at least one of the classes C1 to C8 or we have:

 T ⊆ G/Z ⊆ Aut(T) for a non-abelian simple group T, and

• G acts absolutely irreducibly on $V = \mathbb{F}_q^n$.
